EXPERTIR SOFTWARE

Image: epc_tablette

The EXPERTIR software was designed by EPC-Belgique for the purpose of managing mine or open pit blasting. It has modules which feature different functionalities and degrees of complexity.

- EXPLOBASE is a module that manages a database of explosives and their rates.
- EXPLOCALC is a calculator for optimizing the theoretical lattice drilling based on actual energy explosives, while optimizing the operating cost.
- EDITIR is a help in the blast design and primer sequence software. It works ont the basis of a theorical size front.
- FRONTIR is an extension of EDITIR for real fronts having been subject to a 3D frontal measuring.
